i returned this after getting about 10 pages in. i am wondering if this has been translated from another language? the writing was mistake filled and extremely general.it was so general that i felt i was reading one of my high school student’s papers. the author made some very bold statements without giving specific credit to the studies he/she claimed regarding the findings. weird for a 'medical' book/paper.i am very interested in music therapy. this was going to be my first book on the subject.i will look elsewhere.

This book is good for an introduction on what the therapy can do and in what ways it’s used. I appreciated the explanations of the different types of music therapy used. It is missing examples of these techniques are used clinically. Lastly, when using text to speech it reads the sources under the pictures so it would be nice to have a index of the credits rather than in the text.
