Update: I'm lowering my review down from 3 stars to 1 star for the following reasons. When I rely on this book to do my coursework, it ends up taking much longer than it should, along with a lot of guessing, because the majority (not just a lot, but most) of the drawings have very noticeable inaccuracies. On several of the drawings which require accurate dimensions to complete, the given information is not reliable. For example, just turning to a random drawing I've done in the past, Drawing 9-7, they are telling me a 2 foot hour tick will fit within a 2 foot clock... and a 1 foot minute tick (very small in picture), is also a very small fraction. Along with the Font of 2 feet, which clearly will not look good in a 2 foot clock. and an inch thick donut around the clock does not look like the picture. Another example drawing 10-1, suggests using a 1 foot snap, yet most of the placements of things are on the inch scale. and says to set precision to 0'-0', which is unheard of. I would
recommend that people stay away from this book. It is very difficult to use, and now, I usually just ignore what they’re telling me. As I sit here doing homework, I notice another inaccuracy, on drawing 11-2. The mp3 player is 6.18 units wide, with a 5.242 unit wide screen. The screen appears centered, but then it says it’s edge is .5 units away from the edge of the player. Being centered, that means the mp3 player would be 5.242+.5+.5=6.242 which is greater than the actual width. If I place the screen as it describes, there is a noticeable Asymmetrical look to it, which is different than the text. If I could, I would rate this product 0 stars. It appears there was absolutely no proof-reading by a careless publisher.
