Don't let the part of the title that says "for Seniors" sway you away from this book. This is a GREAT book to introduce computers to anyone of any age (though, given how connected kids are from birth these days, one could argue it is - in fact - a book for those who grew up in the days before 24/7 connectedness; that is, "seniors"). As I said, don't dismiss this book out-of-hand because not only is this an excellent resource for introducing computers in general, it also serves as an excellent resource for those who "fear" making the leap from Windows XP/Vista/7 to Windows 10. The book follows the standard "Dummies" 4-5 section approach. In this book the sections are "Get Going!," "Getting Things Done With Software," "Going Online," "Having Fun," and "Windows Toolkit." "Get Going!" deals with unpacking and setting up the computer. "Getting Things Done With Software" introduces the OS (Windows 10). "Going Online" is a primer for safe surfing. "Having Fun" discusses topics that should help the reader get to the point that working with a computer doesn't have to be all work. And "Windows Toolkit" discusses keeping the computer running safely and efficiently. What doesn't follow the "Dummies" approach is the lack of cartoons. I can think of a number of uses for this book: home, senior center, adult continuing ed class text, etc. I plan to use it in my day job as a mental health counselor. Like every other mental health counselor/social worker I work with many clients who find computers intimidating and burdensome: while the clients realize computers are necessary, they tend to find them overwhelming.
