Real-Time Embedded Components And Systems With Linux And RTOS (Engineering)
Synopsis

This book is intended to provide a senior undergraduate or graduate student in electrical engineering or computer science with a balance of fundamental theory, review of industry practice, and hands-on experience to prepare for a career in the real-time embedded system industries. It is also intended to provide the practicing engineer with the necessary background to apply real-time theory to the design of embedded components and systems. Typical industries include aerospace, medical diagnostic and therapeutic systems, telecommunications, automotive, robotics, industrial process control, media systems, computer gaming, and electronic entertainment, as well as multimedia applications for general-purpose computing. This updated edition adds three new chapters focused on key technology advancements in embedded systems and with wider coverage of real-time architectures. The overall focus remains the RTOS (Real-Time Operating System), but use of Linux for soft real-time, hybrid FPGA (Field Programmable Gate Array) architectures and advancements in multi-core system-on-chip (SoC), as well as software strategies for asymmetric and symmetric multiprocessing (AMP and SMP) relevant to real-time embedded systems, have been added. Companion files are provided with numerous project videos, resources, applications, and figures from the book. Instructors’ resources are available upon adoption.FEATURES:ã¢â‚¬â€œProvides a comprehensive, up to date, and accessible presentation of embedded systems without sacrificing theoretical foundationsã¢â‚¬â€œFeatures the RTOS (Real-Time Operating System), but use of Linux for soft real-time, hybrid FPGA architectures and advancements in multi-core system-on-chip is includedã¢â‚¬â€œDiscusses an overview of RTOS advancements, including AMP and SMP configurations, with a discussion of future directions for RTOS use in multi-core architectures, such as SoCã¢â‚¬â€œDetailed applications coverage including robotics, computer vision, and continuous mediaã¢â‚¬â€œIncludes a companion disc (4GB) with numerous videos, resources, projects, examples, and figures from the bookã¢â‚¬â€œProvides several instructors’ resources, including lecture notes, Microsoft PP slides, etc.

Book Information

Series: Engineering
Hardcover: 500 pages
Publisher: Mercury Learning & Information; 2 edition (January 18, 2016)
Language: English
ISBN-10: 1942270046
